Envirollogic Expands Team with Two New Hires

Kalamazoo, MI — Envirollogic Technologies, Inc., an environmental consulting and services firm, announced today the hiring of two employees for its expanding business in Michigan. “Our new team members provide the additional staff necessary to support our continued growth in the Remedial Investigation and Environmental Due Diligence markets,” said Jeff Hawkins, CEO of Envirollogic. “We look forward to fully utilizing their education and technical skills to enhance our project teams.”

Mahta Naziri Saeed recently graduated from Michigan Technological University with a Master of Science in Environmental Engineering and joined Envirollogic’s team as a Project Environmental Engineer.

Mahta received her Bachelor of Science in Chemical Engineering from the Iran University of Science and Technology and has held Research Assistant and Intern Engineering positions, both of which further broadened her experience in the field and enabled her to apply her technical knowledge outside of the classroom. Mahta is another strategic hire for the Environmental Investigation and Remediation Group; her expertise, educational achievements, and field experience make her a valuable addition to the staff. Mahta also brings a history of community volunteerism which she looks forward to continuing in Kalamazoo.

Paige Russell, a local from Portage, Michigan, is the newest member of the Envirollogic team and is currently pursuing her Engineering Degree.

Paige comes to Envirollogic with a strong background in business and a passion for the sciences. Her strong work ethic and dedication ensure she will be successful both as a student and a team member. Paige excels at client communication, which is essential to Envirollogic’s client-focused culture. She joined the team as Project Scientist and will continue the history of providing the comfort and security needed to ensure liability protection and risk management for due diligence clients.

Both Mahta and Paige bring the necessary technical and interpersonal skills to succeed in their new roles with Envirollogic. To learn more about the services they and the other Envirollogic team members provide, please visit our website at www.envirollogic.com.

#####
